Creative-Cork

Creative-Cork is a design brand that aims to create ecological and sustainable pieces of furniture made with cork through the harmony of innovative design with the traditional knowledge of artisans.

We are an exclusive brand that is concerned with environmental issues, so we were inspired by nature and made cork our main raw material, thus protecting the environment in order to leave a healthier planet for future generations.

Creative-Cork

Creative-Cork est une marque de design qui vise à créer des meubles écologiques et durables en liège grâce à l'harmonie du design innovant et les connaissances traditionnelles des artisans.

Nous sommes une marque exclusive qui se préoccupe des questions environnementales, nous avons été inspirés par la nature et fait du liège notre principale matière première, protégeant ainsi l'environnement afin de laisser une planète plus saine aux générations futures.

Natural design

Cork

Cork is a raw material cork obtained from the bark of the cork oak tree. The durability of the cork is remarkable. It has unique and incomparable qualities that no human engineer has succeeded in imitating or bettering. Among its properties, the cork is 100% natural, water resistant and stain resistant.

Stripping is carried out manually and the trees are never cut down. After each stripping, the cork oak undergoes an original process of self-regeneration of the bark, which gives the activity of cork harvesting a uniquely sustainable nature

Liège

Le liège est une matière première obtenue à partir de l'écorce du chêne-liège. La durabilité du liège est remarquable. Il a des qualités uniques et incomparables que l'humain n'a pas réussi à imiter ou à améliorer. Parmi ses propriétés, le liège est 100% naturel, résistant à l'eau et résistant aux taches.

L'écorçage est effectué manuellement et les arbres ne sont jamais abattus. Après chaque écorçage, le chêne-liège subit un processus original d'auto régénération de l'écorce, ce qui donne à l'activité une nature unique et durable

Creative-Cork
Natural design

A cork oak tree with a thick, reddish-brown trunk and dense green foliage stands in the foreground on the left. The ground is covered in dry, golden-brown grass. In the background, a line of similar trees stretches across the horizon under a clear blue sky with a few wispy clouds.

DOES THE CORK OAK NEED TO BE CUT DOWN TO HARVEST THE CORK?

NO! Stripping is carried out manually and the trees are never cut down. After each stripping the cork oak undergoes an original process of self-regeneration of the bark, which gives the activity of cork harvesting a uniquely sustainable nature.

WHY CORK?

ANTI MICROBIAL

Naturally anti-microbial, meaning that it kills or slows the spread of microorganisms. It is also resistant to mold and mildew. Resistant to dust and toxin absorption, those who suffer from allergies will appreciate this.

COMFORT

One of the most surprising characteristics of cork seating is its comfort. Cork is composed of suberin which has buoyant elastic and fire retardant properties. The feel of cork compressed sanded cork has been compared to velvet. Corks shape does not change specifically when squeezed or pulled.

SUSTAINABLE

Cork is produced by removing the bark of the Quercus suber (the cork oak). It is harvested by hand, every nine years or so. The bark is stripped from the tree and it continues to live and grow. The cork that we use is the post production waste left over after wine stoppers have been produced.

RESILIENCY

Our cork furniture is solid all the way through without a grain, therefore it is a very durable product that is easy to maintain or repair. Cork can be maintained with virtually any cleaning substrate, or just water. Stains sit on the surface, they do not penetrate.

HYDROPHOBIC

Cork is an impermeable natural material that rejects fluids of all types, because the cork we use has been compressed the impermeability has been magnified.
